1 General

1.1 Symbols

Warnings

Signal words are used in this manual and apply to hazards or unsafe practices which could result in personal injury or property damage. See the information below for definitions of the signal words.

**DANGER**

Danger indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

**WARNING**

Warning indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

**CAUTION**

Caution indicates a potentially hazardous situation which, if not avoided, may result in property damage or minor injury or both.

**IMPORTANT**

Indicates a hazardous situation that could result in damage to property if it is not avoided.

Gives useful tips, recommendations and information for efficient, trouble-free use.

1 GENERAL

1.4 Limited Warranty

PLEASE NOTE: THE WARRANTY BELOW HAS BEEN DRAFTED TO COMPLY WITH FEDERAL LAW APPLICABLE TO PRODUCTS MANUFACTURED AFTER JULY 4, 1975.

This warranty is extended only to the original purchaser who purchases this product when new and unused from Invacare or a dealer. This warranty is not extended to any other person or entity and is not transferable or assignable to any subsequent purchaser or owner. Coverage under this warranty will end upon any such subsequent sale or other transfer of title to any other person.

This warranty gives you specific legal rights and you may also have other legal rights which vary from state to state. Invacare warrants the mechanical and electrical components of this product when purchased new and unused to be free from defects in materials and workmanship for a period of two years from date of purchase from Invacare or a dealer, with a copy of the seller's invoice required for coverage under this warranty. Invacare warrants all welds of this product when purchased new and unused to be free from defects in materials and workmanship for a period of five years from date of purchase from Invacare or a dealer, with a copy of the seller’s invoice required for coverage under this warranty. If within such warranty period any such product shall be proven to be defective, such product shall be repaired or replaced, at Invacare's option, with refurbished or new parts. This warranty does not include any labor or shipping charges incurred in replacement part installation or repair of any such product. Product repairs shall not extend this warranty - coverage for repaired product shall end when this limited warranty terminates. Invacare's sole obligation and your exclusive remedy under this warranty shall be limited to such repair and/or replacement.

For warranty service, please contact the dealer from whom you purchased your Invacare product. In the event you do not receive satisfactory warranty service, please write directly to Invacare at the address on the back cover, provide dealer’s name, address, and the date of purchase, indicate nature of the defect and, if the product is serialized, indicate the serial number. Do not return products to our factory without our prior consent.

LIMITATIONS AND EXCLUSIONS: THE FOREGOING WARRANTY SHALL NOT APPLY TO SERIAL NUMBERED PRODUCTS IF THE SERIAL NUMBER HAS BEEN REMOVED OR DEFACE, PRODUCTS SUBJECTED TO NEGLIGENCE, ACCIDENT, IMPROPER OPERATION, MAINTENANCE OR STORAGE, PRODUCTS MODIFIED WITHOUT INVACARE’S EXPRESS WRITTEN CONSENT (INCLUDING, BUT NOT LIMITED TO, MODIFICATION THROUGH THE USE OF UNAUTHORIZED PARTS OR ATTACHMENTS; PRODUCTS DAMAGED BY REASON OF REPAIRS MADE TO ANY COMPONENT WITHOUT THE SPECIFIC CONSENT OF INVACARE, OR TO A PRODUCT DAMAGED BY CIRCUMSTANCES BEYOND INVACARE’S CONTROL, AND SUCH EVALUATION WILL BE SOLELY DETERMINED BY INVACARE. THE WARRANTY SHALL NOT APPLY TO NORMAL WEAR AND TEAR OR FAILURE TO ADHERE TO THE PRODUCT INSTRUCTIONS.

THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IN LIEU OF ANY OTHER WARRANTIES WHATSOEVER, WHETHER EXPRESS OR IMPLIED, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, AND THE SOLE REMEDY FOR VIOLATIONS OF ANY WARRANTY WHATSOEVER, SHALL BE LIMITED TO REPAIR OR REPLACEMENT OF THE DEFECTIVE PRODUCT PURSUANT TO THE TERMS CONTAINED HEREIN. THE APPLICATION OF ANY IMPLIED WARRANTY WHATSOEVER SHALL NOT EXTEND BEYOND THE DURATION OF THE EXPRESS WARRANTY PROVIDED HEREIN. INVACARE SHALL NOT BE LIABLE FOR ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES WHATSOEVER.

SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGE, OR LIMITATION OF HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE EXCLUSION AND LIMITATION MAY NOT BE APPLICABLE.

THIS WARRANTY SHALL BE EXTENDED TO COMPLY WITH STATE/PROVINCIAL LAWS AND REQUIREMENTS.
2 Overview

2.1 Label Locations

- Close cover when not in use. Otherwise, personal injury may occur.
  - p/n 1180192 Rev B

- DO NOT use bed with flammable gases. Explosion may occur. Only use nasal or mask oxygen delivery equipment. Otherwise, fire can occur.
  - p/n 1171783 Rev E

- The bed MUST be in its lowest position when the patient is left unattended.
  - p/n 1180195 Rev D
  (Located on both bed ends)

- p/n 1180180 Rev C

2 OVERVIEW

Application Environment 3-LTC - Long term care in a medical area where medical supervision is required and monitoring is provided, if necessary, and medical electrical equipment used in medical procedures may be provided to help maintain or improve the condition of the patient.

Application Environment 4-Domestic - Care provided in a domestic area where medical electrical equipment is used to alleviate or compensate for an injury, disability, or disease.

**Product Description**

The G5510 bed is a steel framed medical bed that allows for deck height adjustability and mattress deck articulation through the use of electronic actuators.

The G5510 bed is for assisting in diagnosis, monitoring, prevention, treatment, alleviation of disease, or compensation for an injury or disability in an indoor environment.

**Interaction of Patient with Bed**
2.3 Accessories and Accessory Weight

DANGER!

Risk of Injury or Damage

Improper use of this product may cause injury or damage.

- If you are unable to understand the warnings, cautions, or instructions, contact a healthcare professional, dealer or technical personnel before attempting to use this equipment.
- DO NOT use this product or any available optional equipment without first completely reading and understanding these instructions and any additional instructional material such as user manuals, service manuals or instruction sheets supplied with this product or optional equipment.
- The G7740P trapeze is not approved for use with the G-series bed.
- The 6628, 6628-TSS, G6629, 6629, G6630, 6630, and 6632 bed rails are not approved for use with the G-series bed.
- The 5143IVC and 5143A bed extenders are not approved for use with the G-series bed.

This product can be purchased at Sherwin Williams Automotive paint branches only.
3 Safety

The Safety section contains important information for the safe operation and use of this product.

3.1 General Guidelines

DANGER!

Risk of Injury or Death
Bed accessories designed by other manufacturers have NOT been tested by Invacare.
Use of NON-Invacare bed accessories may result in injury or death.
- Use ONLY Invacare rails, mattresses, bed extenders and other accessories with Invacare bed products.

DANGER!

Risk of Death, Injury, or Damage
Improper use of this product may cause injury or damage.
- If you are unable to understand the warnings, cautions, or instructions, contact a healthcare professional, dealer or technical personnel before attempting to use this equipment.
- DO NOT use this product or any available optional equipment without first completely reading and understanding these instructions and any additional instructional material such as user manuals, service manuals or instruction sheets supplied with this product or optional equipment.

To avoid injury or product damage:
Set-up and Assembly instructions MUST be performed by a qualified technician only. “Qualified Technician Only” sections are marked accordingly.
DANGER!

Risk of Death, Injury, or Damage
Continued use of the bed with damaged parts could lead to the bed malfunctioning, causing injury to the user and/or caregiver.
- Check all bed components and carton for damage, and test components before using. In case of damage, or if the bed is not working properly, contact a qualified technician or Invacare for repair.
The Invacare G5510 Bed has been engineered to provide reliable operation. The bed has been thoroughly tested and inspected prior to shipment.
Conditions such as restlessness, mental deterioration and dementia or seizure disorders (uncontrolled body movement), sleeping problems, and incontinence can also significantly impact a patient’s risk of entrapment. Pediatric patients or patients with small body size may also have an increased risk of entrapment.
- Monitor patients with these conditions frequently.
The expected useful life of the G5510 bed is 5 years.
Mattress platform, bed ends, pendent, and accessories are APPLIED PARTS.

NOTICE
THE INFORMATION CONTAINED IN THIS DOCUMENT IS SUBJECT TO CHANGE WITHOUT NOTICE.
The slats may take a relaxed position over time. This is normal and there is no compromise to the bed's structure. This is not a warranty issue.

The slats are designed as part of an integral sleep surface. Be careful not to stand on individual slats or drop on rigid objects as localized bending may occur.

DO NOT use the slats as a hand hold to assemble/disassemble or move the bed, otherwise the slats may bend resulting in permanent damage.

**Disposal of Equipment and Accessories**

Follow local governing ordinances and recycling plans regarding disposal of the device or components normally used in operation. The device does not generate waste or residue in operation. Any accessories not part of the device MUST be handled in accordance with the individual product marking for disposal.
3 SAFETY

Electrical

DANGER!

Risk of Death, Injury, or Damage

Shock hazards and risk of fire exist due to use of improper extension cord and use of three prong adapters.

- To avoid injury or product damage, when using an extension cord, use only an extension cord having at least 16 AWG (American Wire Gauge) wire and the same or higher electrical rating as the device being connected.

To reduce the risk of electric shock, this furnishing has a polarized plug (one blade is wider than the other). This plug will fit in a polarized outlet only one way.

- If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician to install the proper outlet.

- DO NOT change the plug in any way

Protection to the user against electrical shock hazard is provided by using double insulated construction. Servicing a double-insulated product requires extreme care and knowledge of the system, and is to be done only by qualified service personnel. Replacement parts for a double-insulated product must be identical to the parts they replace. A double-insulated product is marked with the words “DOUBLE INSULATION” or “DOUBLE INSULATED”. The symbol (□) is also able to be marked on the product.
**DANGER!**

**Risk of Death, Injury, or Damage**
To avoid serious injury or product damage due to tripping hazards, strangulation hazards, and/or entangled, pinched, or severed cords:
- Ensure that all cord(s) are routed and secured properly.

To avoid injury or product damage:
- DO NOT open assemblies such as the motors, pendant, junction boxes or gear boxes. No user serviceable parts are inside. Contact dealer or Invacare for repair/replacement.
- Unplug the power cord from its power source before performing any maintenance on the electric bed.

**WARNING!**

**Risk of Injury or Damage**
To avoid injury or damage from misuse:
- ALWAYS position bed so that power cord is easy to access.
- DO NOT unplug the power cord from the power supply. Damage to cord will result. Refer servicing to qualified personnel only.
3 SAFETY

CAUTION!
Risk of Damage
To avoid damage to the power supply or the bed malfunctioning:
- To prevent overheating, the power supply MUST not be covered during bed operation (i.e. pillows, blankets, etc.).

Entrapment Warning

DANGER!
Risk of Death, Injury, or Damage
Proper patient assessment and monitoring, and proper maintenance and use of equipment is required to reduce the risk of entrapment. Variations in bed rail dimensions, and mattress thickness, size or density could increase the risk of entrapment.

Operating Information

DANGER!
Risk of Death, Injury, or Damage
To avoid electrical damage, product damage, shock and/or personal injury:
- Keep all bed components and accessories a minimum of 12 inches away from hot or heated surfaces.
WARNING!
Risk of Injury or Damage
Continued use of the bed with damaged parts could lead to the bed malfunctioning, causing injury to the user and/or caregiver.
- Check ALL bed components and carton for damage, and test components before use. In case of damage, or if the bed is not working properly, contact a qualified technician or Invacare for repair.
- Before operating the bed, detach power supply from the slat located under the bed. Keeping the power supply attached to the slat may cause overheating resulting in the bed malfunctioning.

DANGER!
Risk of Death, Injury, or Damage
To avoid pinching, crush and collapse hazards from bed deck contact with objects under the bed:
- Do not place any objects or let any individual underneath the bed or in between the raised bed frame components at any time.
To avoid choking from small detachable parts contained underneath the bed:
- Closely supervise children, pets, or people with physical/mental disabilities.
3 SAFETY

Operating Information

DANGER!

Risk of Death, Injury, or Damage

To reduce the risk of electrical shock:

- When bed is not to be used for an extended period, unplug electric bed from the wall outlet.

- If a liquid is spilled in or around the electric bed, unplug the electric bed before cleaning. Clean up the spill and allow the electric bed or the area around the electric bed to dry thoroughly before using the electric controls again.

- If the unit is not working properly or is inoperable, call a qualified technician to examine the unit and repair it.

This bed is NOT designed to be used as a patient transport.

- When transporting a patient, use an approved patient transport.
DANGER!

Risk of Death, Injury, or Damage

To avoid injury or damage when operating or moving the bed:

- Bed is only meant to be moved about patient room for cleaning or access purposes.
- Only use bed indoors
- DO NOT use near explosive gases
- ALWAYS ensure that the individual utilizing the bed is positioned properly within the confines of the bed. DO NOT let any extremities protrude over the side or between the bed rails when performing these functions.
- Make sure head and foot sections are connected securely to the bed ends before use.
- The bed is equipped with locking casters. When transferring into or out of the bed, ALWAYS lock all 4 locking casters. Inspect the wheel locks for correct locking action before actual use. Even with casters properly locked, some flooring surfaces such as tile or wood will allow the bed to move under some conditions. Use on surfaces such as these MUST be evaluated by the care provider

To avoid injury or damage from emergency crank when motor is on:

- ALWAYS remove emergency crank(s) before performing electronic functions.
DANGER!

Risk of Death, Injury, or Damage

To avoid bed collapse and resulting injury or damage:
- NEVER permit more than one person on the manual/electric bed at any time.
- Evenly distribute body weight over the surface of the manual/electric bed.
- DO NOT lay, sit or lean in such a way that your entire body weight is placed only on raised head or foot sections of the bed. This includes when repositioning or transferring into or out of bed.
- DO NOT push on raised head or foot sections of the bed.
- After this bed has been assembled, ALWAYS test to make sure that all sections of the bed are properly and securely in place before using.

To avoid injury or damage from entanglement with bed components or bed collapse:
- Keep all moving parts, including the main frame, mattress deck, and all drive shafts, free of obstruction (i.e. blankets/sheets, tubing, wiring, cords, etc) during operation of the bed.
WARNING!

Risk of Injury or Damage

A safety feature of this product includes protection against overheating caused by excessive or extended periods of operation. Depending on the duration, this includes multiple or repeated adjustments or the use of multiple functions at one time.

- To assure trouble free operation, ALWAYS allow a slight pause between multiple adjustments and avoid pressing more than one function button at a time.

- If thermal protection activation should occur, the bed will not respond to pendent commands. Given this situation, release the pendent button and allow the bed unit to sit for several minutes. This will allow the protection function time to reset and restore bed function. Depending on the severity of the initial overheating, this could take up to 30 minutes.

Pendent is constructed of latex-free materials.
3 SAFETY

Repair or Service Information

WARNING!

Risk of Injury or Damage

To avoid injury or damage:

DO NOT open assemblies such as the motors, pendent, power supply or gear boxes. No user serviceable parts are inside. Only qualified technicians are permitted to repair these parts. If unqualified individuals perform any work on these beds, the warranty is void.

Make sure connector locking caps are properly positioned and locked to the bus cable. Otherwise, spilled liquid may get into the electrical connection causing malfunctions to the electrical system.

DO NOT force the connector together; otherwise injury or damage may occur.

Inspect the covering of the bed's power supply and the patient pendent to assure that the covering is not cracked or damaged.

After any adjustments, repair or service and before use, make sure all attaching hardware is tightened securely. Unsecured parts could vibrate loose causing bed components to disengage causing injury and/or damage to the bed.

Replacement Parts/Accessories

DANGER!

Risk of Death, Injury, or Damage

To avoid electrical shock, product damage and personal injury:

- Use masked or nasal type oxygen administering equipment only in conjunction with the electric bed. The use of ANY other type of oxygen administering equipment can result in a fire hazard.

- Equipment not suitable for use in the presence of flammable mixtures.
**DANGER!**

Risk of Death, Injury, or Damage
To avoid injury or damage from fall or entrapment:
- Invacare recommends the use of mattress keepers.

**WARNING!**

Risk of Injury or Damage
ALWAYS test to make sure that the bed rails are properly and securely in place before using the bed.
DO NOT use the bed rails as push handles for moving the bed.
3  SAFETY

DANGER

Risk of Death, Injury, or Damage

- When used with an Invacare G5510 Bed, the bed rails DO NOT fall under any weight limitations. Bed rails can be deformed or broken if excessive side pressure is exerted on the bed rails. The bed rail is not an assist rail for getting into or out of bed. These bed rails are used for the purpose of preventing an individual from inadvertently rolling out of bed. The bed rails are NOT intended nor may be used for restraint purposes. If an individual is capable of injuring himself/herself, a physician or a healthcare professional should be consulted for alternative means of safe restraint.

- When using nasal or masked type oxygen administering equipment, the oxygen or air tubing MUST be routed and secured properly to ensure that the tubing does not become entangled and/or severed during normal operation of the bed.

- Invacare recommends that the mattress be centered on the bed frame. Otherwise, individuals may become entangled between the bed rail and the bed frame.

- Physically challenged individuals who cannot prevent themselves from rolling/climbing out of the bed may require alternative safe means of restraint.

- Once patient assessment concludes that the patient's condition increases the chance of entrapment, the bed MUST be in the flat position when left unattended. The bed should be left in its lowest position when patient is left unattended in order to reduce the risk of injury due to falls while getting into or out of bed, or while lying on the bed.

- Trapeze units MUST be positioned on a bed end as near as possible to the center point of the bed end. The trapeze is to be used only in assisting the patient in repositioning or transferring into or out of the bed.

- NEVER allow patients to use trapeze or traction units as a total individual weight support.
Weight Limitations

**DANGER**

Risk of Death, Injury, or Damage

To avoid injury or damage from bed collapse:

- The combined weight of the patient (350 lb. (159 kg) max patient weight), mattress, bedding and all accessories MUST not exceed safe working load of 450 pounds (204 kg.).
WARNING
Risk of Injury or Damage
To avoid injury or damage from crush hazard:
- Caregivers MUST be aware of the bed-floor clearance when using lifts or any other device that assists the bed user that enters between the lowest component of the bed and the floor.
4 EMC Information

4.1 Electromagnetic Compatibility (EMC) Information

Medical Electrical Equipment needs special precautions regarding EMC and needs to be installed and put into service according to the EMC information provided in this manual.

Radio Frequency Interference

**WARNING**

Risk of Injury or Damage

Electronic equipment may be influenced by Radio Frequency Interference (RFI).

- Caution should be exercised with regard to the use of portable communications equipment in the area around such equipment.

- If RFI causes erratic behavior, unplug the electric bed IMMEDIATELY. Leave unplugged while transmission is in progress.

**WARNING**

Risk of Injury or Damage

The use of accessories, transducers, and cables other than those specified by the manufacturer, may result in increased emissions or decreased immunity of this bed.

- This bed should not be used adjacent to or stacked with other equipment. If adjacent or stacked use with other equipment is necessary, this bed should be observed to verify normal operation in the configuration in which it will be used.
The G 5510 Bed is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer or the user of the G 5510 Bed can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the G 5510 Bed as recommended below, according to the maximum output power of the communications equipment.

<table>
<thead>
<tr>
<th>Rated maximum output power of transmitter W</th>
<th>Separation distance according to frequency of transmitter m</th>
</tr>
</thead>
<tbody>
<tr>
<td>150 kHz to 80 MHz</td>
<td>80 MHz to 800 MHz</td>
</tr>
<tr>
<td>d=1.2 √P</td>
<td>d=1.2 √P</td>
</tr>
<tr>
<td>0.01</td>
<td>.12</td>
</tr>
<tr>
<td>0.1</td>
<td>.38</td>
</tr>
<tr>
<td>1</td>
<td>1.2</td>
</tr>
<tr>
<td>10</td>
<td>3.8</td>
</tr>
<tr>
<td>100</td>
<td>12</td>
</tr>
</tbody>
</table>

For transmitters rated at a maximum output power not listed above, the recommended separation distance d in metres (m) can be estimated using the equation applicable to the frequency of the transmitter, where P is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

NOTE 1 At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies.

NOTE 2 These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.
5 Operation

Bed Operation and Component Overview

Refer to Operating the Bed on page 36
Refer to Using the Emergency Crank on page 41
5 OPERATION

WARNING!

Risk of Injury or Damage
To avoid unintentionally pressing the pendent buttons and causing injury or damage:
- DO NOT place pendent under or between objects.

DANGER!

Risk of Death, Injury, or Damage
To avoid serious injury or product damage due to tripping hazards, strangulation hazards, and/or entangled, pinched, or severed cords:
- Ensure that all cords are routed and secured properly.

DANGER!

Risk of Death, Injury, or Damage
To avoid pinching, crush and collapse hazards from bed deck contact with objects under the bed:
- DO NOT place any objects or let any individual underneath the bed or in between the raised bed frame components at anytime.
5.1 Operation Verification

Before placing any bed into use, test it by operating it through all phases of its operation.

If any problems arise during the test, recheck all electrical connections and mechanical hook ups.

This bed uses a six function pendent for all bed operations.

This bed is equipped with an emergency crank to allow operation in the event of a power outage.

Keep power supply as close to the electrical outlet as possible.
5 OPERATION

5.2 Operating the Bed

For this procedure, refer to FIGURE 1 on page 37.
To disable operation of the electric bed, lift connector cap and unplug the pendent cable from the bus cable port.
To cut power to the bed, remove the power cord plug from the electrical outlet.

Raising and Lowering the Entire Bed

- To raise the entire bed, press the "Bed Up" button.
- To lower the entire bed, press the "Bed Down" button.

The G-Series bed is capable of a height adjustment range of 15.25 ± 2 to 32.25 ± 2 inches. Under Normal Use, the bed should operate in a height range of 15.25 ± 2 to 23.00 ± 2 inches.

Raising and Lowering the Head and Foot Sections

- To raise the head of the bed, press the "Head Up" button; To lower the head of the bed, press the "Head Down" button.
- To raise the foot of the bed, press the "Foot Up" button; To lower the foot of the bed, press the "Foot Down" button.
FIGURE 1  Operating the Bed

- Head Down Button
- Head Up Button
- Bed Up Button
- Foot Down Button
- Foot Up Button
- Bed Down Button
5 OPERATION

5.3 Operating the Locking Function on the Locking Caster

- LOCK - Push down on the lever.
- UNLOCK - Pull up on the lever.

> Locking the casters may not prevent the bed from moving on slick or slippery surfaces.

5.4 Electrical Connections

> When installing/removing pendent cable, port cover, or power supply to bus cable, ensure that flat edge of each connector is aligned with the flat edge of the corresponding connector.

---

**FIGURE 2** Operating the Locking Function on the Locking Caster

**FIGURE 3** Electrical Connections
5.5 Installing/Removing Pendent and/or Port Cover

For this procedure, refer to FIGURE 4 on page 40.

Installing Pendent

1. Plug pendent cable into bus cable port located on either right or left side (Detail “A”).

2. Lower connector cap to lock the connection in place (Detail “C”).

Removing Pendent

1. To disable operation of the electric bed, lift the connector cap (Detail “B”).

2. Unplug the pendent cable from the bus cable port (Detail “A”).

Installing Port Cover

There is a port on each side of the bed for the pendent to be plugged in to that allows the pendent to be located on either side of the bed. The port that is not being used MUST be covered using the provided port cover.

1. In the unused port of the bus cable, install port cover (Detail “D”).

2. Lower connector cap to lock the connection in place (Detail “F”).

Removing Port Cover

1. To remove the port cover, lift the port cover cap (Detail “E”) and remove the port cover from the bus cable port.
5 OPERATION

FIGURE 4 Installing/Removing Pendent and/or Port Cover
5.6 Using the Emergency Crank

If the bed needs to be adjusted manually due to a power outage or an electronic malfunction, use the emergency crank to make the adjustments. You should find the emergency crank attached to the slats. If you do not find the crank, contact your dealer.

1. Disconnect the pendant from the bus cable.
2. Remove the emergency crank.
3. Locate the exposed shaft end according to the function you want to perform. Refer to FIGURE 5.
4. Attach the emergency crank to one of the following:
   - Shaft of head actuator to raise/lower head section
   - Shaft of Gearbox to raise/lower the entire bed
   - Shaft of foot actuator to raise/lower foot section
5. Push in the emergency crank while turning it the desired direction. Turn clockwise to raise. Turn counterclockwise to lower.

FIGURE 5 Using the Emergency Crank
5 OPERATION

5.7 Optional Bed Rails

**DANGER!**

Risk of Death, Injury, or Damage

Proper patient assessment and monitoring, and proper maintenance and use of equipment is required to reduce the risk of entrapment. Variations in bed rail dimensions, and mattress thickness, size or density could increase the risk of entrapment.

6 Dealer Section - Packaging, Handling, and Set-Up

### WARNING

**Risk of Injury or Damage**

The procedures in this section MUST be performed by a qualified technician. Any modifications to the G5510 bed are strictly prohibited.

#### 6.1 Unpacking and Handling

### DANGER

**Risk of Death, Injury, or Damage**

To avoid injury or damage from electrical shock or misuse:

- DO NOT plug the power cord into a power source until assembly is complete. To do so could result in damage or personal injury.
- DO NOT attempt to operate bed controls prior to completion of assembly, otherwise damage to bed components may occur.

**Unpacking the Bed Ends**

1. Remove any loose packing from the carton.
2. Bed End carton includes:
   - Two Bed Ends - Any surface of the bed ends may be gripped for handling except the gear box.
   - Four Locking Casters
   - One Drive Shaft Assembly in two pieces.

**FIGURE 1** Unpacking the Bed Ends
Unpacking Foot and Head Sections

1. Remove any loose packing from the carton.
2. Foot Section carton includes: One Foot End Section (electric beds include pendent, power supply with power cord, and head, foot and hi/lo motors with cables), and one emergency crank handle. Only frame members should be gripped on the foot section for handling.
3. Head Section carton includes: One Head End Section. Any part of the head section may be gripped for handling.

FIGURE 2 Unpacking Foot and Head Sections
6.2 Set-Up

Assembling the Head and Foot Sections

For this procedure, refer to Assembling the Head and Foot Sections on page 46.

**WARNING**

DO NOT attempt to operate bed controls prior to completion of assembly as damage to bed components or personal injury may occur.

**CAUTION**

DO NOT use the slats as a hand hold to assemble/disassemble or move the bed, otherwise the slats may bend resulting in permanent damage.

1. Remove the head section (G50) and foot section (G54) of the bed from their packing cartons.
2. Place the head section on its side to your left so the center mounting latches are on the right.
3. Open the head section to a 45° to 90° angle for support.
4. Place foot section on its side to your right with the head section pull tube at the top of the assembly. The center mounting rivets should be on the left.
5. Place the head and foot sections approximately 90° from each other.

6. Hook the bottom head section center mounting latch to the bottom foot section center mounting rivet (FIGURE 4).

7. Hook the top head section center mounting latch to the top foot section center mounting rivet (FIGURE 4).

For set-up purposes, the motors on the foot section as well as the crank handles should be on your right.

It may be necessary to lift the head section or foot section slightly to secure the mounting latches and rivets.
8. After head and foot sections are connected, push the sections into a horizontal (straight) position while keeping the sections on their sides.

**Adjusting and Reconnecting the Head Section Pull Tube**

> For this procedure, refer to FIGURE 5 on page 48.

1. To disconnect the head pull tube assembly from the side frame of the foot sections, remove the hitch pin, grommet/washer from the clevis pin (Detail "A").
2. Extend the inner pull tube shaft manually until the sections button "clicks" into the adjustment hole of the outer pull tube.
3. Connect the pull tube end assembly to the lift arm of the head section as follows (Detail "B"):  
   A. Insert the clevis pin into the lift arm slot.  
   B. Replace the grommet/washer.  
   C. Secure with hitch pin.
FIGURE 5 Adjusting and Reconnecting the Head Section Pull Tube
6.3 Assembling the Bed Ends

Installing the Casters

**WARNING**

Risk of Injury or Damage

Ensure that all four casters are locked and that the bed does not move before transferring.

- DO NOT transfer occupant to the bed if bed is not stable.

For this procedure, refer to FIGURE 6 on page 49.

1. Lay the bed end flat on the floor.

2. Insert the shaft of a locking caster assembly into the caster socket in the leg of one of the bed ends.

3. To prevent excess movement of the bed during assembly, lock the caster. Refer to Operating the Locking Function on the Locking Caster on page 38.

4. Repeat STEPS 1-3 for the remaining casters.

![FIGURE 6 Assembling the Bed Ends](image)

Installing/Removing the Bed Ends

Installing

For this procedure, refer to FIGURE 7 on page 50.

1. Stand one bed end as close to the head section as possible (Detail “A”).

2. Grasp the head section, by the side, and raise it until the rivets on the corner plates of the section are high enough to place into the corner locks on the bed end (Detail “A”).
3. Tilt the bed end toward the head section and place the rivets into the corner locks (Detail “A”).
4. Return the bed end to its full upright position. The head section rivets will lock into place (Detail “A”).
5. Repeat the same procedure for other bed end (Detail “B”).

Removing
1. While holding the bed end at the foot of the bed, lift up on the foot section and disengage the rivets out of the corner locks (Detail “B”).
2. Place the bed end and foot section on the ground.
3. While holding the bed end at the head of the bed, lift up on the head section and disengage the rivets out of the corner locks (Detail “A”).
Assembling the Drive Shaft

**WARNING**

Risk of Injury or Damage

DO NOT attempt to operate bed controls prior to completion of assembly as damage to bed components or personal injury may occur.

Close the gearbox shaft covers over all gearbox shafts not in use, before placing the bed in service. Otherwise damage or injury may occur.

For this procedure, refer to FIGURE 8 on page 52 and FIGURE 9 on page 53.

The drive shaft for the Hi/Lo function consists of two sections that are shipped unassembled. The inner shaft has a positioning spring button, and the outer shaft has three positioning holes, one storage position hole and a telescoping end.

1. Remove the plastic caps from each end of the drive shaft.
2. Press spring button on the inner shaft and insert the inner shaft into the outer shaft.
3. Engage the spring button into the positioning hole.
4. Attach the inner shaft to the bottom gear box output shaft on the head end of the bed.
5. Push in on the spring loaded end of the drive shaft and attach to the foot end of the bed as follows:
   - Attach drive shaft to the Hi/Lo motor output shaft facing head end of bed.
6 DEALER SECTION - PACKAGING, HANDLING, AND SET-UP

FIGURE 8 Assembling the Drive Shaft

- Attach the Hi/Lo Motor to the foot end gear box as follows:
  i. Locate the Hi/Lo motor output shaft spring-loaded coupler.
  ii. Ensure the Hi/Lo motor output shaft spring-loaded coupler is properly aligned with the foot end gear box as shown in Detail “A” of FIGURE 9 on page 53.
  iii. Release the Hi/Lo motor output shaft spring-loaded coupler by pushing in against the Hi/Lo motor output shaft spring-loaded coupler and turning clockwise.
  iv. The coupling will release and engage the foot end top gear box output shaft cross pins.
  v. Ensure that all components are securely installed.

If necessary, shift bed end to right or left to align the Hi/Lo motor output shaft spring-loaded coupler with the foot end gear box.
**FIGURE 9** Assembling the Drive Shaft
6 DEALER SECTION - PACKAGING, HANDLING, AND SET-UP

Inspecting the Bed

**WARNING**

**Risk of Injury or Damage**

When installing any connectors into the bus cable, be sure the connector locking cap is secure after installation - otherwise, injury or damage may occur.

- All motors, power supply, connectors and wiring are located on the foot section.
- Connect power supply and pendent. Each connector is labeled with its specific function.

1. Inspect the power supply cord and motor cables for cuts or damage to the cord and/or plug.
2. Inspect the power supply for any damage to the connectors.
3. Ensure that all cable plugs are connected securely.
4. Make sure all cables are routed properly.
5. If damage is found, contact an Invacare Customer Service Representative to report the damaged items and request appropriate replacement parts or products.
6. Make all the electrical connections. Refer to Electrical Connections on page 38.

6.4 Electrical Connections

- When installing/removing pendent cable, port cover, or power supply to bus cable, ensure that flat edge of each connector is aligned with the flat edge of the corresponding connector.
6.5 Installing/Removing Mattress Keepers.

Recommended location for mattress keepers is on the end slat on both sides.

**Installing**
1. Position mattress keeper over end slat as shown in Detail “B”.
2. Slide mattress keeper back until tab locks onto side rail as shown in Detail “C”.

**Removing**
1. Grasp mattress keeper and lift tab up to release from side rail (Detail “B”).
2. Slide mattress keeper off of end slat (Detail “B”).
6.6 Connect Power Supply

1. Plug power supply into bus cable port marked power.
6.7 Storing the Bed

For this procedure, refer to FIGURE 13 on page 58.
It is not necessary to disconnect power supply and pendent from the bus cable for storage.
If bed is not being assembled immediately, retain the cartons and packaging for storage until ready for assembly.
Store the Invacare homecare bed in a dry area.

**WARNING**

**Risk of Injury or Damage**
To avoid injury or damage from falling objects and/or moving parts:
DO NOT place other objects on top of the cartons.
DO NOT leave pendent or power supply in the stored position (strapped to the bed) during operation.

**CAUTION**

**Risk of Damage**
To avoid damage during transport:
Power supply and pendent are intended to be stored onto slat located under support brace for protection during transportation

When performing STEP 1, the preferable slat to secure the pendent/power supply for storage is directly above the support brace. See Detail “B” in FIGURE 13.

1. Coi up pendent cable and power supply cable and secure with hook and loop provided to the underside of the slat located above the support brace bed.
FIGURE 13  Storing the Bed
# Troubleshooting/Maintenance - User/Dealer

For access to part numbers, see online parts book at www.invacare.com or call Invacare.
8 Maintenance and Cleaning

WARNING

Risk of Injury or Damage

To avoid injury or damage from misuse:
- Read all general guidelines, warnings and cautions before performing any repair/maintenance on the bed.
- All repair and maintenance on the bed should be performed by a qualified technician.

Invacare recommends the following maintenance/cleaning procedures be conducted initially, between users or as needed. This form is provided as a guide to help with documentation.

8.1 Maintenance Checklist

<table>
<thead>
<tr>
<th>Mechanical Inspection and Maintenance</th>
<th>Electrical Inspection and Maintenance</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ Inspect rail latches. Ensure that all rails engage and lock as specified.</td>
<td>□ Inspect for damaged or loose wiring. Have a qualified technician replace any frayed or damaged cords.</td>
</tr>
<tr>
<td>□ Lubricate rail pivot points and all mechanical hinge points, bushings, and surface contact points as needed with white lithium grease.</td>
<td>□ Inspect all electrical bed components for damage or excessive wear (i.e. cracked or broken housings, or worn components).</td>
</tr>
<tr>
<td>□ Inspect bed, rails, assist rails, or assist bars for the presence of tubing end caps and replace as required.</td>
<td>□ Check pendent, power and motor cords for chafing, cuts or excessive wear.</td>
</tr>
<tr>
<td>□ Inspect all bed components (i.e. rails, clevis pins, hitch pins, etc...) for damage or excessive wear and replaced as necessary</td>
<td>□ Make sure all plugs are fully attached and free of damage.</td>
</tr>
<tr>
<td>□ Visually examine all welds for cracks.</td>
<td>□ Make sure all connectors are properly positioned and locked</td>
</tr>
<tr>
<td>□ Inspect the head and foot sections for bending, warping or damage.</td>
<td>□ Check all functions: Head raises and lowers properly, Foot raises and lowers properly, Bed Ends raise and lower properly.</td>
</tr>
</tbody>
</table>
8 MAINTENANCE AND CLEANING

<table>
<thead>
<tr>
<th>Mechanical Inspection and Maintenance</th>
<th>Electrical Inspection and Maintenance</th>
</tr>
</thead>
<tbody>
<tr>
<td>❑ Inspect all bolts and rivets to ensure that they are securely tightened and functioning properly.</td>
<td></td>
</tr>
<tr>
<td>❑ Check sleep surfaces to ensure all slats are intact.</td>
<td></td>
</tr>
<tr>
<td>❑ Check casters to ensure they lock, if applicable, and roll properly.</td>
<td></td>
</tr>
</tbody>
</table>

Pass/Fail
❑ PASS: Bed and all components have passed all of the above inspection criteria and the bed is ready for placement into a client’s home.
❑ FAIL: Bed, or any component, has failed any of the above inspection criteria. Tag the bed or component with a complete description of the failure(s) and have the bed serviced.

8.2 Cleaning the Beds

WARNING
Risk of Injury or Damage
To avoid injury or damage from liquid ingress during maintenance:
- DO NOT spray water into any power supply connection ports.
- The electronic motors, power supply and pendants are protected against the entrance of dust and water when properly attached.
- Before disassembling or washing an electric bed, disconnect the power supply from the electrical outlet.
Washing the Bed

1. Before cleaning the bed, perform the following:
   - Ensure that the pendent cable, port cover, motor, actuators, and power supply are securely connected to the bus cable.
   - Ensure connector cap on all connections is lowered to lock connection in place.

2. Disconnect the power supply of the bed from the electrical outlet before washing.

3. Make sure all electrical parts are not damaged and that all connection ports are plugged.

4. Remove the head and foot boards. Refer to Installing/Removing the Bed Ends on page 49.

5. Inspect bed components for any exposed metal. To prevent rusting, Invacare recommends covering those areas with touch-up paint.

6. Disinfect and wash all components and exterior surfaces using a mild soap/detergent and soft bristle brush or sponge. DO NOT submerge the bed frame or electrical parts.
8 MAINTENANCE AND CLEANING

7. Using household water pressure only, rinse thoroughly with water (maximum temperature 110°F or 43°C). DO NOT power wash or steam clean. DO NOT use solvents, bleach, alcohol, petroleum products, caustic agents, or highly alkaline or acidic agents to clean the bed.

Drying the Bed

DANGER

Risk of Death, Injury or Damage

Dirty water may damage or stain flooring. Grease leaks can lead to a fall or fire.
- Ensure bed ends are completely drained and dry before placing on flooring.
- Inspect bed ends for leaking grease. Contact service provider if grease or other residue is detected.

1. Tip the bed from side to side to allow any collected or trapped water to drain.
2. Thoroughly towel dry bed and all components.
3. Repeat drying process until all components are dry

Ensure that the bed is completely dry before storing.
Usability Survey

Please complete the survey below to evaluate this manual. Your participation in the evaluation assists in the development of effective and usable manuals for our customers. The survey is also available online: http://www.invacare.com/TechnicalDocumentSurvey.

1. Please indicate your primary involvement with the product (Choose one):
   - [ ] Product User/Owner
   - [ ] Product Service Technician
   - [ ] User Assistant
   - [ ] Health Care Provider
   - [ ] Product Dealer
   - [ ] Other (Please specify):

2. Please indicate which product manual you are evaluating:

3. Evaluate the content:

4. Evaluate the Warnings/Cautions:

5. Evaluate the style:
   - [ ] Is anything hard to locate/follow? 
   - [ ] Are any headings missing/confusing? 
   - [ ] Are there too many headings? 
   - [ ] Should any material be a bulleted list or checklist instead of numbered steps or a paragraph? 
   - [ ] Is there material that might be clarified by a visual? 
   Explain:

6. Evaluate the illustrations:
   - [ ] Are the illustrations useful? 
   - [ ] Do the illustrations need more or less detail? 
   - [ ] Is the number/size of illustrations adequate? 
   Explain:

7. Do you have suggestions for other ways of making this document easier to use?
