INNOVATIVE INVACARE® THERAPURE™ BATHING SYSTEMS OFFER A BETTER BATHING EXPERIENCE, PURE AND SIMPLE

ELYRIA, Ohio—June 18, 2010—Invacare Continuing Care is pleased to introduce TheraPure bathing systems powered by exclusive SANIJET® Pipeless™ technology for unsurpassed purity, ease of use and a luxurious spa bath.

Purity

Purity is the essence of bathing, and TheraPure bathing tubs are **certified by NSF International to meet demanding hospital-grade disinfection standards** established in Protocol P182. The tubs' innovative pipeless technology allows caregivers to remove up to 99.9% of infectious bacteria* in less than five minutes after each bath. All wetted components are easily reached and cleaned for superior infection control. In addition, TheraPure tubs are also easily accessible for cleaning, and retain only about 0.2 ounces, or less than a teaspoon, of water after each bath. In contrast, typical piped and air bubble systems can retain up to 13 ounces of dirty water after each bath, which is circulated in the next resident's bath water.

Ease of Use

Not only are TheraPure tubs quickly, easily and thoroughly disinfected, but they are also easy for caregivers to use. Auto fill and auto shut-off features allow the caregiver to focus on the resident as the bath fills, and an integrated lever allows the caregiver to control desired water pressure directly from the wand. Updated control consoles are integrated into the shell for aesthetics and ease of cleaning and feature intuitive controls.. The 6302GADH Adjustable Height Supine Tub can be raised or lowered to a comfortable working position for the caregiver at the touch of a button.

Luxurious spa experience

In addition to the unsurpassed purity that pipeless technology affords, TheraPure bathing systems offer residents a more relaxing spa bathing experience- quieter, warmer and more soothing. The pipeless jets create a more calming bath experience, as they generate a fraction of the noise that piped or air bubble systems generate. Plus, the bath water stays warmer longer- a TheraPure bath loses only 1.5 F degrees of temperature in a 20 minute bathing cycle, almost imperceptible to the human body. While the resident relaxes in a peaceful bath, caregivers can add bath salts or essential oils without concern of residue build-up, thanks to all wetted components' easy accessibility for cleaning. Pipeless jets deliver soothing hydrotherapy to complete a better bathing experience, pure and simple.

Invacare TheraPure tubs are available in free-standing side-entry, recessed side-entry, and free-standing supine models. For more information, visit www.invacare-cc.com.
